PROFESSIONAL SUMMARY

Computer Science undergraduate (B.Tech, expected 2026) with hands-on experience building RAG pipelines, LLM-integrated applications, and agentic workflows using LangChain, LangGraph, ChromaDB, and FastAPI. Focused on retrieval systems, agentic orchestration, and applied LLM evaluation. Internship experience across GenAI, data analytics, and software development. Seeking an AI Engineer role to apply practical LLM integration and applied ML experience to production systems.

SKILLS

AI/ML & GenAI: LLMs, RAG, Prompt Engineering, Embeddings, Vector Search, LangChain, LangGraph, NLP, Retrieval Evaluation

Programming & Tools: Python, Java, C, SQL, FastAPI, React.js, MongoDB, ChromaDB, JDBC, Jinja2, Docker, AWS (EC2)

Data & Other: Power BI, Tableau, Excel, Pandas, Analytical Thinking, Team Collaboration, Communication

EXPERIENCE

RAG Developer — FrugalX *Dec 2025 – Apr 2026*

- Built a RAG pipeline for an AI book-writing application using LangChain and LangGraph for orchestration, with document chunking, embeddings, and vector-based retrieval via ChromaDB
- Integrated the Gemini API with prompt engineering to reduce hallucination rate by ~10%, achieving 85% relevant chunk retrieval within the top-5 results
- Cut prompt token usage by ~30% by limiting context to the top-3 relevant chunks, lowering inference cost while maintaining output quality
- Containerized the pipeline with Docker and deployed on AWS EC2, achieving consistent response times of 1-3 seconds

GenAI Intern — Smart Interz (Google Cloud-run Program) *Jun 2025 – Oct 2025*

- Built GenAI application modules using the Gemini API and ChromaDB for vector storage and retrieval, applying responsible and ethical AI practices throughout
- Designed prompt engineering strategies and AI application architectures through structured, project-based development
- Applied generative AI and NLP techniques to real-world use cases, including automated content generation and workflow automation

Data Analytics Intern — Deloitte *Jan 2024 – Apr 2024*

- Analyzed datasets exceeding 1,000+ records using Python and statistical analysis to identify key trends and derive actionable insights
- Built interactive dashboards in Tableau to visualize complex data patterns and support stakeholder decision-making
- Automated data cleaning and preprocessing workflows using Python, improving analysis efficiency

PROJECTS

Personalized Learning AI | *FastAPI, MongoDB, React.js, NLP, Python*

GitHub: github.com/ananya320/personalized-learning-ai

- Developed an AI-powered web application that personalizes learning content using NLP and LLM-based recommendation techniques
- Designed adaptive content delivery based on real-time user performance data
- Built a scalable backend using FastAPI and MongoDB with a React.js frontend

AI Book Generating App | *FastAPI, LLM API, LangChain, LangGraph, Jinja2*

GitHub: github.com/ananya320/bookai

- Built an AI-based system generating book ideas, outlines, and full content from user input using RAG with LangChain/LangGraph orchestration, REST APIs, JSON-based storage, and a lightweight Jinja2 UI powered by LLM prompt engineering

AR Shopping Website [In Progress] | *WebAR, Three.js, Blender*

- Building an AR shopping platform enabling real-time 3D product visualization using WebAR and Three.js, targeting sub-2-second asset load times
- Designing a responsive UI with custom Blender-created 3D assets

EDUCATION

B.Tech, Computer Science *2022 – 2026*

Dr. A. P. J. Abdul Kalam Technical University, Lucknow

First Division

Relevant Coursework: Machine Learning, NLP, Data Structures & Algorithms, Database Management Systems, React.js, Python
